PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol Δ in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with Δ , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

CAUTION : Regular type resistors and capacitors are not listed. To know those values, refer to the schematic diagram.
NOTE : This model has two difference colors. (B) : Black (W) : White

LASER BEAM SAFETY PRECAUTIONS

Do not look directly at the laser beam coming from the pick-up or allow it to strike against your fingers, skin, etc.
Do not apply power if there is a broken part in the laser output section of the pick-up.

Structural Safety Interlock

This model has a disc chuck lever and top lid. This disc chuck lever and top lid prevent to expose the laser beam for users.

INVISIBLE LASER RADIATION EXPOSURE TO BEAM IS DANGEROUS CLASS 1 LASER PRODUCT

1. HANDLING THE PICK-UP

1. Shipping and storage cautions

- The pick-up must be stored in a conductive bag until immediately prior to its use.
- Do not drop it or subject it to impacts.

2. Repair cautions

- When handling the pick-up, be careful not to give it undue force or shock by your hands. Otherwise the pick-up may malfunction or the PCB may be cracked.
- The pick-up which has been minutely adjusted before shipment as one part. Never touch and move the adjusting points and setscrews of the pick-up unless otherwise described in the item of adjustment to avoid damage.

c. A strong magnet is used in the pick-up.

Do not bring a magnet or other magnetized object near to it.

d. Cleaning the lens

- * If dust gets on the lens, clean it away by using an air brush such as used for a camera lens.
- * The lens is held in place by a spring.
If the center of the lens is dirty, carefully clean it using cotton swab moistened with isopropylalcohol. Since special coating is made on the surface of the lens which is made of plastics, do not use other kind of alcohol and cleaning fluid to prevent damage to the lens. Also, be careful not to bend the lens spring when cleaning.

BEFORE REPAIRING THE CD PLAYER

1. Preparations

- Many ICs, LSI and the Pick-up (laser diode) are used in the compact disc player. These components are sensitive to static electricity, and might be damaged by static electricity or high voltage, so particular care should be taken regarding this point.
- Many precision components and the lens are used in the pick-up.
Never attempt to make repairs, or to store parts, where the temperature or humidity is high, where magnetism is strong, or where there is much dust.

2. Notes regarding repairs

- Be sure to first disconnect the power plug before attempting to replace any component.
- All tools, instruments, etc., used for measuring must be grounded.
Grounding can be accomplished by using a conductive metal sheet on the work bench.
- To prevent AV leakage of the soldering iron, ground its metal part.
- Repair personnel must be grounded.

CD MECHANISM REMOVAL

1. PREPARATIONS

- When handling the pick-up, take care not to exert excessive force, and particular care should be taken not to touch the lens or the drive circuits printed circuit board pattern.
- When if disc tray was deep in, stop to pull the disc tray by force at hand and push from rear. Because it do so, break the teeth of Tray gear (6).

2. EXCHANGE THE DISC TRAY

- Remove the screw. (1)
- Turn right the Gear (12) and take to left end the disc tray. (2)
Be not sure the disc tray to pull by force at hand.
- Push forward the claw of disc tray, and pull out it. (3)
- When mount the disc tray, Gear (12) to turn the right way of the arrow. (2)
- Set the disc tray to put at mechanism chassis.
- Being push the disc tray, confirm the Tray drive gear (3) and disc tray are closely gear with as figure. (4)
- Fasten a screw. (1)

3. CD MECHANISM REMOVAL

(1) HOW TO PICK-UP BLOCK

- Remove the disc tray. [See "2" EXCHANGE THE DISC TRAY 1), 2), 3)]
- Take to left end the gear (12) and turn the pick-up left way to the arrow (2).
- Remove the spring wire by tweezers. (3)
- Continuously, remove the pick rack gear. If pick-up was not move a direction of the arrow (2), it is not able to remove.
- If remove to fasten the pick-up block by the screw (51), pick-up block is removable.
- Set the timing gear to O condition.

(2) HOW TO REPLACEMENT OF THE SPINDLE MOTOR

- First, prepare the new turntable and new special washer for replacement.

The removed turntable will be formed by the heat of the soldering iron, and can not be reused.

- Prepare the dial-type calipers.

- Attached bonding material can be dissolved by using a 60W soldering iron to heat the shaft at the top part of the Turntable (45) for about one minute.
- Turntable (45) can then be removed from the shaft with very carefully applying force upward at the center of the lower surface of the turntable.
- Remove the two screws (46) and remove the Spindle motor (48).
- Wipe off the motor shaft from top to lower 10mm more by using a piece of cloth with methanol.
- Attach the special washer (47) to the spindle motor.
- Attach the motor to the chassis.
- Apply a half of grain of rice to mount at the shaft about 2mm under from top.

Bonding materials are mixed with "Three Bond 2001" and "2105F" and mixture ratio is 1:1.

CD MECHANISM REMOVAL

- Install the new turntable as shown in the right figure.
- Secure the turntable by pressing gently.
- Confirm any bonding material coming out of the upper face (hole) of the Turntable, if it do so be sure to attach the methanol and wipe away by using a piece of cloth or similar materials.

- Install the spindle motor as angle of previous page right below.

- Insert the shaft (43) as 45° angle.

If broken the stopper wing, wipe the shaft by using a piece of cloth and apply the cemedine #575 and fix the chassis (50) and the shaft.

(3) REPLACEMENT AND LUBRICATION OF THE PICK-UP

- Pull out the two shaft (pick-up rail) from chassis.
- If the pick-up is reconditioned or replaced, be sure to wipe the rails and also apply a coating of FLOIL (G-4748) to their entire circumference and entire length.

(4) REPLACEMENT OF THE SLED MOTOR

Remove the two pan-head screws that hold the motor, and then replace the motor (38).

HOW TO ATTACH OF TURNTABLE

(5) CHECKING THE OPERATION OF THE SLED MOTOR (The state of disc tray remove)

- Apply a voltage of 0.6V.
Confirm the direction of movement of the pick-up to inner groove to outer groove can't stop and move it smoothly.
- Apply a voltage of 4.0V and after loading and gear (9) is slip. Confirm the current 120mA or more to at this time.

CD MECHANISM REMOVAL

4. CD MECHANISM ASSEMBLY & APPLY GREASE

(1) APPLY GREASE AND INSTALL THE TRAY SLIDE

- 1) Apply the grease FLOIL (G-474B) at part of right figure
- 2) When insert a tray slide (15), set up the installation position with base and tray timing gear as follow figure.

No.	PIN NAME	I/O	FUNCTION
1	TEST 1	I	Test pin. Normally not connected.
2	AO	O	VCO is generated by connecting resonance circuit between AI and AO (8.6436MHz). PDO is phase output with EFM signal, and is set to increase frequency when "+".
3	AI	I	
4	PDO	O	
5	V _{SS}	-	GND
6	EFMO	O	1 to 2V ^{PP} HF signal is input to EFMIN. O Output from EFMO and EFMO passes through amplitude limiter and reverse phase EFM signal is obtained from both. This performs slice level control.
7	EFMO	O	
8	EFMIN	I	
9	TEST 2	I	
10	V _{DD}	-	+5V
11	CLV +	O	Disk motor control output.
12	VCO -	O	
13	FOCS	O	Focus servo is off when FOCS is HIGH. The lens is lowered by FST and then FST is HIGH, the lens is gradually pulled up. FOCS is reset when FZD is generated. For focus-in.
14	FST	O	
15	FZD	I	
16	HFL	I	Kick pulses, JP+ and JP-, are generated according to track jump command. A jump of the prescribed number of tracks is (1, 4, 16, 64).
17	TES	I	
18	FSEQ / PCK	O	When 4.3218MHz PCK monitor terminal / DEMO is HIGH both SYNC detected from EFM signal and SYNC of counter are the same at HIGH.
19	TOFF	O	Kick pulses, JP+ and JP-, are generated according to track jump command. A jump of the prescribed number of tracks is (1, 4, 16, 64).
20	TGL	O	
21	THLD	O	
22	JP +	O	
23	JP -	O	
24	DEMO	I	Set and sound output adjustment pin function.
25	TEST 3	I	Test pin. Normally not connected.
26	EMPH	O	De-emphasis is necessary when HIGH.
27	DFOFF	I	ON / OFF switch for digital filter. No filtering when HIGH.
28	DSPOFF	I	Test pin. Normally LOW.
29	SMP 2	O	Signal output to DAC and signal for L/R switching and sample hold.
30	LRCLK	O	
31	V _{DD}	-	+5V
32	SMP 3	O	Signal output to DAC and signal for L/R switching and sample hold.
33	SMP 1	O	
34	DFOUT	O	
35	DACLK	O	
36	DFIN	I/O	Signal output for CD-ROM. CD-ROM sync signal.
37	LRSY	O	
38	MSBF	I	Signal output to DAC and signal for L/R switching and sample hold.
39	CK 2	O	2.1609MHz
40	AD10	O	RAM address output.
41	\overline{OE}	O	Output state when \overline{WE} = L and input state when \overline{WE} = H. OE is for input/output control.
42	\overline{WE}	O	
43	AD09	O	RAM address output.
44	AD08	O	
45	AD07	O	
46	AD06	O	
47	AD05	O	
48	AD04	O	
49	AD03	O	
50	AD02	O	
51	AD01	O	
52	AD00	O	
53	DB7	I/O	DB7 to DB0 : Connected to RAM data pins.
54	DB6	I/O	
55	DB5	I/O	DB7 to DB0 : Connected to RAM data pins.
56	V _{SS}	-	
57	DB4	I/O	
58	DB3	I/O	
59	DB2	I/O	
60	DB1	I/O	
61	DB0	I/O	
62	TEST 4	I	Test pin. Normally not connected.
63	TEST 5	I	
64	IOFF	I	For CD ROM. HIGH time interpolation and holding of previous value not performed.
65	EFLG	O	C1 / C2 1-level and 2-level error correction.
66	PW	O	PWSY is SYNC combining main and sub and change from HIGH to LOW is taken externally. The P, Q, R, S, T, U, V, and W subcodes are read by sending 8 clock pulses to SBCK.
67	PWSY	O	
68	SBCK	I	
69	FSX	O	7.35kHz sync signal output
70	WRQ	O	WRQ goes HIGH when data of subcode Q passes CRC check. This is taken externally and the data from SQOUT is read by sending \overline{CQCK} . When data is required with LSB first, M/L is driven LOW. After the micro-processor sets RWC to HIGH, the command is given by output synchronized with the \overline{CQCK} command data.

TAPE DECK ADJUSTMENT

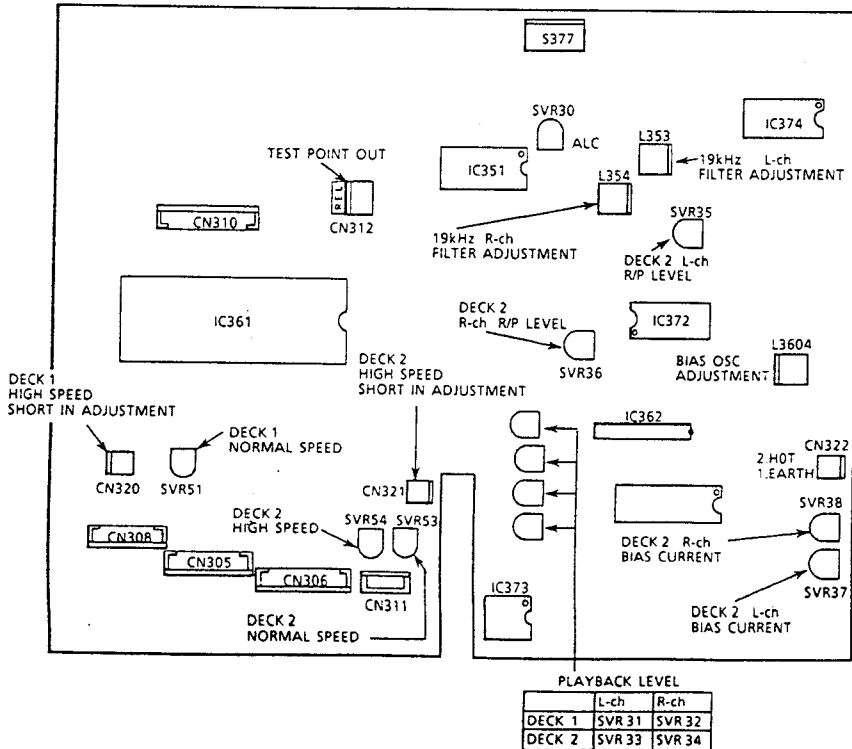

1. AMPLIFIER ADJUSTMENT

	ITEM	TEST TAPE	INPUT	DOLBY	OUTPUT	ADJUST POINT	REMARKS
1	Head Azimuth	VTT738	----	----	TP OUT CN312	Azimuth Screw	Adjust screw so that 10kHz output become maximum. (FWD/REV)
2	Playback Level	TCC130	----	OFF	TP OUT CN312	SVR31,32 (DECK A) SVR33,34 (DECK B)	Adjust SVR so that TAPE OUT output become 0.775V.
3	OSC	AC224	107kHz	OFF	TP OSC CN322	L3604	Beat Cancel SW1 : Adjust 107 kHz Beat Cancel SW2 : Confirm 103 ± 2kHz
4	19kHz Filter	AC224	19kHz ± 10Hz (-5dB)	OFF	TP OUT CN312	L353 (L-ch) L354 (R-ch)	Set frequency 400Hz output to 0dB. Adjust SVR so that 19kHz output become -30dB.
5	Rec/Play Frequency	AC224	1kHz (-25dB) 10kHz (-25dB)	ON	TP OUT CN312	SVR37 (L-ch) SVR38 (R-ch)	Set frequency 1kHz output to 0dB. Adjust SVR so that 10kHz output become +1dB.
6	Rec/Play Level	AC224	1kHz (-5dB)	OFF	TP OUT CN312	SVR35 (L-ch) SVR36 (R-ch)	Adjust to obtain same output of 1kHz and 10kHz

Note.

1. Head azimuth : Be sure both channels (L and R) are the same level and phase. [Both mechanism (DECK 1 and DECK 2)]
2. During adjustment measurement Beat cancel SW is at 1 condition fundamentally, confirm R/P frequency characteristic dolby effect also by 2 condition.

2. PARTS LOCATION

TAPE DECK ADJUSTMENT & TORQUE

3. TAPE SPEED ADJUSTMENT

Note ; ①. Operate the Mechanism with the normal speed.

②. Begin from the high speed in Motor speed adjustment.

- 1) Set the test tape TCW-211 (or equivalent) to both mechanism (Deck 1 / Deck 2).
Adjustment should be made at the center portion (FWD Play) on the tape.
- 2) Play the mechanism in FWD Play.
- 3) Short the high speed test pin to the high speed portion. (by the clip.)
- 4) Confirm the indication of the tape speed counter in Deck 1.
Adjust the tape speed in Deck 2 so as to match in Deck 1. (It is not SVR: high speed in Deck 1.)
Confirm so that a frequency counter reading of high speed become $3000\text{Hz} \pm 10\%$ in Deck 1.
- 5) Adjust SVR54 so that a frequency counter reading become $\pm 5\text{Hz}$ in Deck 2 at the FWD Play and near tape center than in Deck 1.
Example – Deck 1: $3000\text{Hz} \rightarrow$ Deck 2: $3000\text{Hz} \pm 5\text{Hz}$
- 6) Remove the short by the clip, open the high speed test pin. (Normal speed)
- 7) Stop the mechanism drive.
- 8) Set the test tape MTT-111 (or equivalent) to both mechanism (Deck 1 / Deck 2).
Adjustment should be made at the center portion (FWD Play) on the tape.
- 9) Play the Mechanism (FWD Play).
- 10) Adjust SVR51 so that a frequency counter reading become $3000\text{Hz} \pm 5\text{Hz}$ in Deck 1 at the FWD Play and near the tape center.
- 11) Adjust SVR53 so that a frequency counter reading become $3000\text{Hz} \pm 5\text{Hz}$ in Deck 2 at the FWD Play and near the tape center.
- 12) Stop the mechanism drive.

4. CHECKING THE MECHANISM TORQUES

Note : Clean the head, capstan and pinch roller before making any measurement.
